SUMMARY

Data scientist with hands-on experience finding anomalies in production log data and building predictive models, now working on applied AI in industry. Seven of my projects are live, including a churn model, a no-code model comparison tool and a log analyser. I spend most of my time on what decides whether a model is useful: exploring the data, choosing the right metric, calibrating probabilities and setting thresholds by cost.

TECHNICAL SKILLS

Languages & Data: Python, SQL, Pandas, NumPy, PyArrow, EDA, Feature Engineering, Data Cleaning, Data Quality

Machine Learning: scikit-learn, XGBoost, LightGBM, CatBoost, PyTorch, TensorFlow, Classification, Regression, Clustering, Time Series

Modelling: Cross-Validation, Imbalanced Data (PR-AUC), Calibration, Cost-Sensitive Thresholds, Anomaly Detection, Explainability, Fairness

Tools & Cloud: PostgreSQL, MySQL, MongoDB, FastAPI, Docker, Matplotlib, NLP, LLMs and RAG, LangChain, Azure, GCP, AWS

EXPERIENCE

AI Engineer, e-Marketing.io · Jaipur — Jun 2025 – Present

- Build and ship the agency's AI tools, including an NLP **keyword analysis engine** that surfaces search trends, intent and competitor gaps.
- Built an LLM **meeting summarizer**, lead-qualifying chatbots and a **lead dashboard** (FastAPI, React, PostgreSQL) that shows clients where every lead stands.

Data Science Intern, LogiScope Pvt. Ltd. · Bengaluru — Dec 2024 – Jun 2025

- Explored large volumes of system logs (**EDA**) and built anomaly detection with **DBSCAN and an autoencoder**, cutting the time to spot an issue by **20%**.
- Wrote the **FastAPI pipeline** around it (log ingestion, preprocessing, inference and alerts) and connected it to production monitoring.

PROJECTS

DecideX · *scikit-learn, LightGBM, LLMs, FastAPI* — **Live Demo** · **Case Study**

- Only 26.5% of customers churn in the IBM Telco data, so accuracy hides how many leavers a model misses, and missing one costs far more than a false alarm.
- Compared four models on a stratified 60/20/20 split, chose by **PR-AUC**, calibrated with isotonic regression and set the threshold from a 5:1 cost ratio.
- Held-out **ROC-AUC 0.844** and **ECE 0.018**. Recall went from 50.8% to **85.6%** (missed churners from 184 to 54), with gender and age kept out of training.

MLInsights · *scikit-learn, XGBoost, LightGBM, CatBoost, FastAPI* — **Live Demo** · **Case Study**

- Finding the right model for a spreadsheet usually means a notebook per model, which shuts out people who know their data but don't write Python.
- Built a no-code tool that cleans the data and trains any of **68** scikit-learn, XGBoost, LightGBM and CatBoost models with **5-fold cross-validation**.
- It ranks the models side by side and exports the report and trained models. On a 442-row sample, 12 models ranged from **R2 0.08 to 0.47**.

Logvera · *scikit-learn, NumPy, FastAPI, LLMs* — **Live Demo** · **Case Study**

- Anomalies in server logs hide among thousands of normal lines, and half-filled time windows at the start and end of a log were showing up as fake outages.
- Built an ensemble where **five detectors vote** on each window, explained every incident with feature z-scores, and stopped edge windows from being flagged.
- On a 34,492-line sample it learned **84 message patterns** and flagged **3 incidents**, one caught by four of the five models, plus **588 login attacks**.

EDUCATION

B.Tech, Artificial Intelligence and Data Science, Poornima Institute of Engineering & Technology · CGPA 8.5 — Nov 2021 – Jun 2025

RESEARCH

Deep Reinforcement Learning in Algorithmic Trading: A Review (2024); AI-Driven Medical Diagnostic System Using Deep Learning (2024)
